

Asset Flow Management & Parcel Visibility

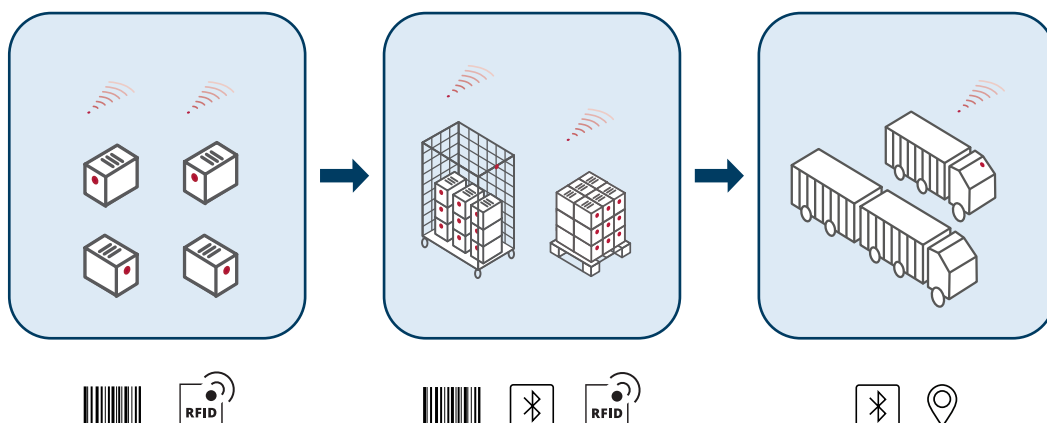

**Full Visibility on Asset Location and Asset Inventory Levels
Enables Automated Tracking of Nested Parcels**

In supply chain operations, it is vital to manage assets, inventory, whereabouts, and availability, such as roll cages and containers. Assets represent an important part of your capacity to serve your customers' requirements in a cost-efficient and environmentally efficient way. Asset tracking and flow management secure operational excellence and strong business performance.

Asset tracking and flow management help you maximize cost efficiency and environmental efficiency by preventing capacity shortages in needed locations, avoiding the cost of lost assets and the cost of buy-

ing replacement capacity, and, finally, reducing CO₂ emissions by minimizing the need to move misplaced capacity between locations. All in all, this enables the right sizing of capacity to drive more business.

Accurate real-time asset location tracking, both inside and outside your own value chain, together with monitoring of actual inventory size at each location, enables operations to ensure the optimal flow of assets into the right areas, securing positive business outcomes.

Ensure Full Visibility of Your Assets' Movement Through Your Supply Chain and Where They Are Located at All Times
